

PREFACE

The statistics of land utilization constitute one of the important items required for planning and development of policy formulation in agriculture. The Directorate of Economics and Statistics in the Ministry of Agriculture has been collecting data on the nine-fold classification of land, irrigated area (source-wise and crop-wise) and total area under crops from individual States in the country. The State-wise summary of the land use details for the years 1995-96 and 1996-97 was brought out in the form of a publication titled “Land Use Statistics At a Glance” for the first time in the year 2000. The present publication is the ninth in the series containing updated data for the period from 1996-97 to 2005-06.

The detailed work involved in the preparation of this issue has been done by Special Data Dissemination Standards Division of this Directorate under the guidance of Smt.Madhu Bala, Adviser and Shri N. Srinivasa Rao, Deputy Economic Adviser. The Directorate is grateful to all the source agencies who have cooperated in submitting the data.

This publication is expected to serve as a useful source to all those concerned with agriculture in the country. Suggestions for improvement would be welcomed.

(A.K. Neog)

Economic & Statistical Adviser

December, 2007.
